

# KYOcontrol Business Edition

SECURITY AND COST MANAGEMENT SOLUTION

EFFORTLESS DOCUMENT SECURITY  
AND COST MANAGEMENT.

# AN EASY-TO-USE SECURITY SOLUTION

## WITH SIGNIFICANT ECONOMIC BENEFITS.

### EFFECTIVE DOCUMENT SECURITY CAN BE SO SIMPLE

Many companies put a lot of time, effort and money into protecting their IT systems – and rightly so. But what happens to your intellectual property or confidential documents when you print them out? They can easily be left lying on the device for 5 minutes or even longer, certainly long enough for the office grapevine to pick up on what is happening. KYOcontrol Business Edition closes this security gap by delivering printouts and copies only when authorised card holders have identified themselves at the device.

### SAFELY STORED UNTIL YOU NEED IT

With KYOcontrol Business Edition encrypted data is safely stored on your central print server. When you need your documents, you identify yourself at the printer or multifunction device by using a convenient swipe card. The device retrieves the documents from the server and starts printing. This ensures that documents are only delivered to people with the authority to receive them. It also means that every single document can be accounted for, giving your company a whole new level of financial security as well.

### Print&Follow™

KYOcontrol Business Edition installed on Kyocera FS-4000DN printer.

You have created the documents you need to sell your ideas so you send them off to the print server. You have another meeting and a business lunch to get through before you can present them, but don't worry, your documents are safely stored on the print server. After lunch you simply identify yourself with your card at the printer closest to the meeting. The documents are delivered right into your hands without anyone having seen them.

Today, IT systems are well protected. Your ideas and your documentation are safe – until you print them out. Now there is a simple way to secure your printouts too. KYOcontrol Business Edition is an easy-to-use solution that integrates seamlessly into your Kyocera print environment. It provides an additional safety layer by ensuring the documents only get to those people who are authorised to have them. And its accounting and reporting functions will even help you to reduce your output costs – an ideal combination for any forward looking business.

## THERE WHENEVER YOU NEED THEM

Have you ever clicked the print button on your computer and then dashed off to the office device, only to find that there is a paper jam and your printouts are not coming out? You run back to your desk to cancel the print job, but the server says the job has been printed. So it's back to the printer. Still no prints. If you are lucky, you will find them there a few hours later. With KYOcontrol Business Edition, all you need to do is go to another printer, identify yourself with your card and pick up your documents. Yes, secure, on-time printing can be that simple and convenient.

A swipe card provides fast and easy access to any Kyocera device on which KYOcontrol Business Edition is installed.

Printouts and copies are only delivered to authorised card holders, thereby providing a high level of security.

All printouts and copies can be attributed to a specific user/project/department.

## EFFORTLESS INTEGRATION INTO YOUR EXISTING KYOCERA PRINT ENVIRONMENT

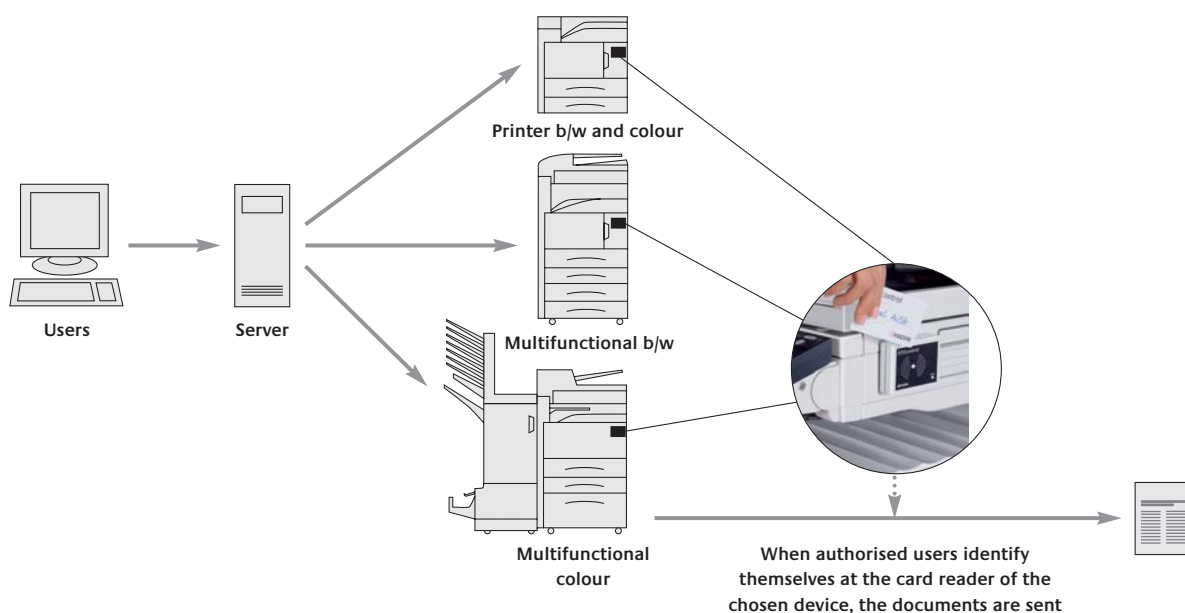

The system is so simple, yet so effective. One small box gives you everything you need to benefit from effective document security and precise document accounting for 1 Kyocera device and up to 20 users. The system is expandable and can support up to 25 devices with a maximum of 500 users. Naturally, KYOcontrol Business Edition integrates easily and seamlessly with Kyocera hardware. All it takes is a simple installation by your authorised Kyocera Business Partner for you to have all the benefits of KYOcontrol Business Edition right at your fingertips.

## A SECURITY SOLUTION THAT IMPROVES PRODUCTIVITY

Even the fastest output device can have a queue if there are a number of large print runs or complex copy jobs that need to be handled. Sometimes your documents get lost in the pile with the other printouts or they are put aside by colleagues who need the space. With KYOcontrol Business Edition life is so much simpler!

- No more paper overflow at the device and no more lost or crumpled printouts. Now the documents only come out when needed.
- No more problems with paper jams, lack of paper or unexpected backlogs. Either the problem is identified and rectified immediately, or you simply take your swipe card to another device and get your printouts there.

The result: your documents are there when you need them without any trouble or frustrating waiting around.

## DO YOU KNOW WHERE YOUR MONEY IS GOING?

A recent study\* showed that companies estimate their copying, printing, and fax-related costs to be around 3% of their annual revenues. Although total costs can vary depending on your size and area of business, the same study showed that the truth is probably double that figure. And for every pound you spend on equipment, supplies and service, you are spending another 6 pence for costs such as infrastructure, end-user interaction time and document management. Indeed, hidden printing costs are a big issue, taking away up to 6%\* of an office's yearly revenue.

KYOcontrol Business Edition can help to uncover hidden costs and identify, manage and control output volumes. By effectively monitoring your Kyocera office devices, KYOcontrol Business Edition will help you to analyse and control your office expenditure. The solution can also help to cut costs even further by controlling and limiting access to specified devices. With KYOcontrol Business Edition you will always know where your money is going.

## MANAGING THE COSTS OF COLOUR PRINTING AND COPYING

With KYOcontrol Business Edition, making colour available in the organisation can increase efficiency without any dramatic increase in costs. KYOcontrol Business Edition allows you to limit the use of colour devices both in terms of access and output of volume. Experience shows that effectively setting limits on the use of colour heightens the sense of responsibility with which the devices are used. With KYOcontrol Business Edition you will have all aspects of office colour usage completely under control.

## ACCOUNTING MADE EASY

KYOcontrol Business Edition enables you to identify, manage and control document output so that document costs can be attributed to departments, individuals or projects. That means that you will be able to accurately measure what is being produced and align it with an invoice for precise accounting.

## REPORTING

KYOcontrol Business Edition can be configured to generate reports that will provide page volume information for each device. This information can be segmented by a number of criteria (users, department, cost centers etc.) to help you determine the usage of the devices in your company. It is a vital step in achieving efficient hardware usage and the optimisation of your fleet to meet your specific demands.

## SO MANY SUBSTANTIAL BENEFITS FROM ONE SMALL BOX

- A highly effective document security solution
- A solution that lets you easily print when and where you want
- A highly reliable cost accounting system that enables you to determine printing and copying costs according to the criteria you need
- An efficient solution to increase productivity
- A flexible solution that can be adapted to your specific needs and can handle up to 25 Kyocera devices with a maximum of 500 users

ALL IT TAKES IS

# ONE LITTLE BOX.
